Tise - Coding task

Qualium Systems, January 2018

Task Description

This task is meant to demonstrate front end development skills. The task should be solved with **React** and **Redux**. It is fine to use other tools as well, but please include a rationale in the readme.

The task is to develop a very lightweight CMS. It should have quadratic cells in a *2*n* **grid** to the right side of the screen.It should be possible to *add* and *remove* cells. Each cell has a *title* and *background image (url)* property.

Please include a **readme** with a description of how to set up and run the project, in addition to a **description of the functionality** and **assumptions** taken during development.

Mockup

This is an example of what the CMS could look like:

localhost:8000/cms

(Shown when a cell is selected)

Title: Enter title

Url: Enter url

Save

title, url [X]	title, url [X]
title, url [X]	title, url [X]
title, url [X]	

Add cell
